Manhard Consulting provides the Village of Hainesville with Contract Operations and Maintenance of their potable water system. Manhard Consulting is responsible for the operations and maintenance of water pumping, treatment, storage and distribution systems including process pumping, treatment, storage and distribution systems including process control and monitoring, sampling, testing, system flushing, valve exercising programs, cross connection control inspection, ordinance preparation assistance, budgeting assistance and preventive maintenance program implementation for the Village.

In addition to providing the resources and technical personnel to keep the Village's water system operating properly, Manhard Consulting provides the services necessary to keep the Village's wastewater collection system operating. Responsibilities include the operation and maintenance of wastewater, collection and pumping facilities including daily operation control of pump stations, routine maintenance, scheduled collection system flushing program, infiltration and inflow monitoring as well as acting as the intergovernmental sewer authority reporting and communications representative.
