Manhard Consulting provided invaluable support and assistance to the Village of Volo as they were going through the process of establishing a potable water system for the Village. Manhard prepared a water system master plan to guide the course for new development infrastructure. Manhard assisted the Village establish the necessary Ordinances and User Rates for the new community water supply.

Manhard Consulting continues to provide the resources and technical personnel to keep the Village's water system operating properly. Manhard personnel are responsible for the operation and maintenance of the water pumping, treatment, storage and distribution facilities including system flushing and valve exercising programs, billing assistance, cross connection and new connection inspection, ordinance preparation assistance, water system master planning, budgeting assistance, preventive maintenance program implementation, as well as connection and user fee rate assistance.
