Good Data from A to Z

Accurate surveying is the cornerstone of much of our work at Manhard Consulting. That's why we've made it one of our core competencies.

Our surveying specialists use the latest technologies to capture surveying and topographical data and feed it to downstream teams dealing with stormwater, environmental and construction-related issues. With good baseline data, Manhard teams have what they need to solve problems and make informed decisions at every phase.

The end result: your project moves from point A to point Z with outstanding results.

Surveying Services

Manhard Consulting provides end-to-end surveying services to residential, commercial, business/industrial, institutional and recreational developers and local, state and federal agencies. Services are available nationwide.

- ◆ Boundary and ALTA Surveys
- ◆ Topographical Surveys
- ◆ Wetland Location Surveys
- ◆ Subdivision Plats
- ◆ Easement Preparation
- ◆ Building Layout
- ◆ Construction Staking
- ◆ DOT Surveys
- ◆ Dedication Plats

Surveying Services

With surveying services from Manhard Consulting, you get good data to build quality projects from the ground up. Our surveying services have been helping clients avoid obstacles, solve problems, and put a solid foundation under their projects for over three decades.

End-to-End Services

Manhard surveying and CAD teams have years of experience mapping rights of way, subdivisions, wetlands, waterways, commercial sites and more. You get complete surveying services from project launch through base mapping through final topos and construction staking. Our crews in the field do what it takes to collect accurate data, then feed it back to in-house surveying teams who turn raw data into usable information.

Instant Connections

A major networking and communications investment at Manhard keeps our field and office crews fully connected. Manhard teams use leading-edge technologies to collect and manipulate data including Trimble surveying equipment, GPS systems, AutoCAD software and high-end communications gear. As data is collected, it's beamed instantly to collection points for processing and computer modeling. Output begins to take shape quickly, allowing Manhard teams in a range of disciplines to put fresh data to work.

A Collaborative Process

Team interaction is a given at Manhard. Our project managers make it a point to meet face-to-face with their crews at least once a week. Field crews communicate constantly with the office via e-mail, video conferencing, instant messaging and cell phones. At Manhard, survey data flows freely across disciplines to engineering teams in water-wastewater, environmental services, construction management, civil engineering and elsewhere. This cross-discipline approach means higher quality survey data and, ultimately, higher quality finished projects.

A 30-year Roadmap

Manhard Consulting has been providing turnkey surveying services to residential, commercial, business/industrial and governmental clients for over 30 years. This is a core competency at Manhard, delivered by licensed professionals, and fully integrated with the other services in our multi-disciplinary firm. Surveying is one of the things we do best, and one of the reasons for our long track-record of success.

Whatever It Takes

The nationwide Manhard network includes offices in the Midwest, Rocky Mountain West, desert Southwest and Southeastern U.S. Wherever you work with a Manhard team, you get the same service, commitment and attention to detail that has defined our company since 1972. Please call us or go online today, and learn how our surveying services can put your project on solid ground.

Manhard surveying crews collect and feed raw data to in-house surveying teams for processing. The output guides many activities at the job site, from erosion control to construction staking to earth moving.

The detail ownership that begins with a Manhard surveying crew continues through every phase of development, resulting in surprise-free projects that are delivered on time and on budget.

Quality surveys provide valuable intelligence for downstream teams dealing with infrastructure, grading, roadways, utilities, stormwater, flood control and more. Accurate data forms the basis of well-executed projects where interrelated components across the development work together.
