

# Finer Detail, Better Insight

## High-Definition Surveying Services

High-Definition Surveying brings survey data to life. This advanced technology collects

hundreds of thousands of measurements in a matter of minutes, and turns the data into detailed, accurate 3D computer models. Detailing the existing conditions of any site, this information allows engineers, architects and designers to make informed decisions and avoid unforeseen circumstances, while adding a level of safety to projects.

At Manhard Consulting, our High-Definition Surveying Services are available to architects, engineers, surveyors, developers, government agencies, and others who need a non-intrusive way to gather as-built survey data. Compared to traditional 2D drawings, high-definition 3D surveys provide a level of detail and understanding that will forever change the way you work.

High-Definition Surveying captures geometric data for sites and structures, and turns it into detailed 3D computer models that bring faster insight to project design and construction.

### Applications

As-Built Surveys / Record Drawings

Building Renovation & Restoration

Mechanical / Electrical / HVAC / Structural Systems

Stockpile & Detention Basin Volume

Tunnels, Bridges & Railroads

Wastewater Treatment Plants

Oil Refineries & Processing Plants

Transmission Towers

Historical Preservation

Roadway Topography

Forensic Science (accident scene investigation)

Archaeological Surveys
